# Root Beer Executive Summary

Using the Github API, we were able to find that there has been progress throughout the months of this Github repository. We found that there are a total of 38 files and that the main file `rootbeerlib/src/main/java/com/scottyab/rooter/RootBeer.java` has been touched over 53 times.

A majority of this repository was written in Java and the second most being Kotlin. From the repo, we see that Matthew Rollings had the most commits with over 113 commits, while Scott Alexander-Brown had 93 commits, the second highest in the repository. There were many people that had only little to no contribution to this project. After seeing the results, we can see that a majority of the developers could leave and the project would still turn out the same way. From a manager standpoint, we suggest keeping those 2 mentioned above and most likely dropping the rest. The most helpful git commands in this lab were the `git log` and `git status`.
